Inventory Management Made Easy

Track, Issue, Replenish & Audit Consumable Inventory

Stay ahead of stockouts and avoid overstocking with real-time visibility into what's on hand, where it's stored, and what's been used.

From stockrooms to warehouses, RedBeam Inventory Tracking adapts to your operations – making it easy to receive, issue, and reconcile inventory using mobile devices and barcode labels.

Built as a cloud-native SaaS platform with flexible APIs, RedBeam is ready to deploy in under a day – no complex setup or IT support required.

Streamline Your Inventory Process

① Tag & Receive

- Add inventory to designated stock locations using barcode scanning
- Generate and print barcode labels directly within RedBeam
- Include purchase order numbers for traceability

② Issue Inventory

- Quickly scan items to issue inventory as needed
- Associate scans with sales or work order numbers for transparency
- Improve accuracy over manual processes

③ Report, Adjust & Audit

- Instantly locate inventory items across locations
- Make quantity or condition adjustments with user-stamped audit logs
- Conduct quick audits with full visibility into changes and users

Flexible for Today. Scalable for Tomorrow.

RedBeam Inventory Tracking grows with your business, whether you're managing a single storeroom or coordinating stock items across multiple sites. Start with simple barcode-based tracking and mobile workflows – and know that cycle counting and other advanced capabilities are already included if your needs change.

Need tighter integration? RedBeam connects easily with your purchasing, ERP, or work order systems to close the loop between usage and replenishment.

Key Features

- Secure, scalable multi-tenant SaaS platform (SOC 2 Type II compliant)
- Simple mobile workflows for receiving, issuing, and adjusting inventory
- Barcode-based tracking with full audit trail for compliance and accountability
- Cycle counting support to maintain accuracy with less disruption
- Real-time inventory levels by item, location, and condition
- Multi-location management with user-specific visibility
- Configurable alerts and threshold-based notifications
- Lot / serial / expiration date tracking

Key Benefits

- Avoid stockouts and excess inventory with accurate real-time data
- Eliminate manual spreadsheets and error-prone tracking methods
- Enable team-wide use with intuitive mobile workflows
- Increase inventory accuracy through cycle counting and audit visibility
- Improve planning and purchasing decisions with built-in reports
- Fast setup and rapid adoption – gain operational value in hours

Our Supported Hardware

Deploy RedBeam Inventory Tracking on widely used scanning, printing, and inventory control devices.
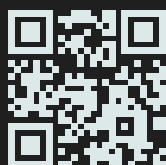

Scanning Devices

- Mobile phones and tablets (Safari or Chrome)
- Barcode scanners (USB or Bluetooth)
- Any compatible mobile scanner with web access

Label Printing

- Zebra ZD42x series printers
- 2×1" Zebra polyester tags
- 2×1" Avery office labels

Optional RFID Integration

- Zebra TC5x series mobile device with RFD40 sled
- Zebra ZT411 RFID printer
- Zebra Silverline RFID tags
